The Transportation Technology Center, Inc. (TTCI) and the Security and Emergency Response Training Center (SERTC) are excited to let you know that SERTC is open for 2021 training!

We are always mindful of the safety, security, and well-being of students and staff members which has increasingly been our number one priority for TTCI and SERTC, and we are committed to continue keeping our students and staff safe and healthy during training courses at our facility. As you prepare for attending our courses, please know that we have updated our standard operating procedures based on guidance from health authorities, such as the Centers for Disease Control and Prevention (CDC) and appropriate government agencies. Additional details on our visitor protocol can be found at www.sertc.org/faq/on-site-rules-and-guidelines/.

We continue to offer our full residential FEMA-NTED certified courses at our world-renowned SERTC campus in Pueblo, Colorado. Our courses will expand your knowledge of hazardous materials response to all forms of transportation to keep you on-track for your HazMat certifications. If interested in attending a residential course, please visit our website at www.sertc.org for more information, course availability, or to apply for training.

In addition to our full residential courses, SERTC also now offers a virtual training platform for three blended learning courses. SERTC Academy training courses start with online learning and are completed with residential learning on our SERTC campus. These courses first address all classroom materials normally covered during our full-residential courses, through live-streaming sessions to allow you to start your training from your home or office. They allow you to interact with SERTC instructors but also provide the opportunity to view and complete recorded trainings should you be unable to tune into live sessions. Upon completing the online portion of these courses, you are then eligible to attend the residential portion at our training campus to successfully complete your training. During the residential portion, there is a complete focus on an immersive, hands-on training experience. No classroom lectures, just active participation out in our training fields on full-size training props that SERTC is known for!

SERTC Academy course offerings:
- PER-290 Tank Car Specialist (TCS)
- PER-291 Highway Emergency Response Specialist (HERS)
- PER-327 Crude Oil/Class 3 Flammable Liquid Emergencies Transported by Rail (FLE-RR)

If you have questions, contact us at sertc@aar.com or call 719.584.0584. We look forward to seeing you soon.

Sincerely,

Forrest Wieder
Executive Director
Security & Emergency Response Training Center (SERTC)
